

## **CARDIOLOGY CONSULTATION LETTER**

Delaware Valley Cardiology Associates – 1200 Walnut St, Philadelphia PA

**Re: Walter Reyes DOB 11/03/1957**

Date of consultation: 12/30/2025

Referring provider: Dr. A. Patel (Primary Care)

Dear Dr. Patel,

Thank you for referring Mr. Reyes for evaluation of left bundle branch block identified on routine ECG 11/2024 and mildly reduced ejection fraction.

### **IMPRESSION:**

1. Chronic LBBB with LVEF 45-50% (TTE 12/09/2025) - etiology not yet defined. Ischemic evaluation is INCOMPLETE. Stress imaging was ordered but the patient deferred scheduling. I have re-emphasized its importance.
2. Paroxysmal atrial fibrillation, CHA2DS2-VASc 4 - continue apixaban 5 mg BID.
3. QTc mildly prolonged at 452 ms - avoid additive QT-prolonging agents.

**RECOMMENDATIONS:** Complete pharmacologic stress imaging within 4-6 weeks. Low threshold for ischemic workup should he develop exertional symptoms.

**ATTACHMENT: Transthoracic Echocardiogram Report 12/09/2025**

LV: LVEF 45-50%. Mild global hypokinesis. No regional wall motion abnormality definitively identified (limited by LBBB dyssynchrony).

LA: Mildly dilated. RV: Normal size and function.

Valves: Trace MR. No AS/AI. No pericardial effusion.

Interpreting cardiologist: R. Whitman, MD, FACC
