

EXERCISE STRESS ECHOCARDIOGRAM REPORT (OUTSIDE RECORD, 09/2024)

Keystone Imaging Center – Media, PA

Patient: Walter Reyes DOB 11/03/1957 Study date 09/17/2024

INDICATION: Dyspnea on exertion; pre-dated LBBB diagnosis.

PROTOCOL: Bruce. Exercised 6:24, 7.1 METS, 84% MPHR. Stopped for fatigue.

FINDINGS:

Rest: Normal LV wall motion, EF 55%.

Peak stress: Subtle hypokinesis of the inferolateral wall, EQUIVOCAL for ischemia. No chest pain during test. Blunted BP response.

IMPRESSION: Equivocal study. Mild inferolateral hypokinesis at peak stress. Recommend correlation with symptoms; consider coronary CTA or invasive angiography if clinical suspicion persists.

*** NO RECORD OF FOLLOW-UP TESTING AT THIS FACILITY. ***
